

A NEW VIEW IN REAL ESTATE MARKETING

Preparing your home for a 3D Virtual Tour

1. Walk through the entire property and close all doors to areas or rooms you do NOT want scanned
2. Turn on all overhead lights and task lighting as you would for general photography.
3. Adjust blinds so a blazing sun is not entering any spaces.
4. Remove anything you do not want captured in the 3D model.
5. Adjust each room exactly how you want them to appear in the 3D model.
6. Turn off any moving ceiling fans.
7. Insure that all pets are removed from the property.
8. Once you are happy with each space in the home, leave it alone. Moving items during the scanning process will affect the quality of the 3D capture model.
9. Scanning will start on the lowest floor and work up each level of the home.
10. Depending on the square footage of the property the scanning process can take anywhere from 2 to 4 hours to complete. Please make sure your Clients are prepared to be out of their home for this extended period of time.

Property Accessibility

Please check the following at the home before we arrive to shoot the 3D model.

- Alarms are off
- If on lockbox please advise for access
- Gate codes
- Doors are open or access key provided
- Unattended pets
- Any situation where no access is available to the property

Thank you for choosing VantagePoint 3D
